Machine Learning & Data Scientist Profile

Computer Science student with extensive practical experience in developing and deploying machine learning solutions. Successfully completed 160+ hours of advanced AI training through competitive government and Microsoft programs. Expert in Python data science stack (Pandas, NumPy, Scikit-learn) with proven ability to build end-to-end predictive systems, including healthcare analytics platforms with Flask deployment. Combines strong mathematical foundation with hands-on implementation skills. Seeking to apply technical expertise in solving complex business challenges through innovative AI applications.

Education

Bachelor of Science in Computer Science | *Expected Graduation: 2026*
Faculty of Computers and Information, Menoufia University
Currently 3rd Year Student
GPA: 3.32/4.0

Work Experience

Machine Learning Projects (Academic & Personal), 2025 – Present
Developed Heart Disease Prediction System using Python, Pandas, Scikit-learn.
Built Newborn Health Monitoring & Risk Assessment web app using Flask.
Applied ML algorithms (Logistic Regression, SVM, Random Forest) achieving >90% accuracy.

Technical Skills

Hard Skills: Machine Learning, Statistics, Algorithms, Data Visualization, Linear Algebra, Python, SQL.

Tools & Technologies:

- Git/GitHub for version control
- Jupyter Notebooks
- Visual Studio Code
- Basic networking concepts (CCNA certified)

Soft Skills: Analytical Thinking, Problem-Solving, Communication Skills, Creativity, Teamwork, Time Management .

Projects

Heart Disease Prediction System | 2025

- **Developed ML model to predict cardiovascular disease risk using patient data**
- **Technologies:** Python, Pandas, Scikit-learn, Matplotlib, Seaborn, Streamlit
- **Algorithms:** Logistic Regression, SVM, Random Forest with comparative analysis
- **Features:** Comprehensive data preprocessing, model training, performance evaluation
- **Deployment:** Interactive web application built with Streamlit for user-friendly predictions
- **Impact:** Supporting early detection for medical decision-making

Newborn Health Monitoring & Risk Assessment | 2025

- **Built intelligent classification system for newborn health risk assessment**
 - **Technologies:** Python, Flask, Scikit-learn, Pandas, NumPy
 - **Features:** Predictive analytics, binary classification (Healthy/At-Risk), web interface
 - **Deployment:** Flask web application with user-friendly interface
 - **Goal:** Supporting healthcare providers with rapid, reliable risk assessment
-

Certifications & Achievements

Machine Learning for Data Analysis – Creativa Innovation Hubs (Jul 2025)

Python & Data Analysis (Machine Learning Program) – Sprints & Microsoft

CCNA Fundamentals – NTI & Cisco
